

维恩的派

```
cd PyQt4 gpl x11-4.12.1
python configure-ng.py
make
make install
验证
直接在命令行进入python的环境,加载PyQt4模块,查看模块信息就可以了
python
>> import PyQt4.
>>help(PyQt4)
>> from PyQt4.QtCore import QTimer
>> from qtpy import QtWidgets, QtGui, QtCore
4、安装编译
apt-get update
apt-get upgrade
sudo apt-get install gitbuild-essential libboost-all-dev python-dev cmake
sudo apt-get install libboost1.55-dev
sudo apt-get install libboost1.55-all-dev
不安装无法编译CTP接口
5、安装mongodb
1.导入软件源的公钥
apt-key adv --keyserver hkp://keyserver.ubuntu.com:80 --recv EA312927
2.为mongodb创建软件源list文件
ubuntu12.04
echo "debhttp://repo.mongodb.org/apt/ubuntu precise/mongodb-org/3.2 multiverse" | sudo tee
/etc/apt/sources.list.d/mongodb-org-3.2.list
echo \ "deb \underline{http://repo.mongodb.org/apt/ubuntu} \ trusty/mongodb-org/3.2 \ multiverse" \ | \ sudo \ tee
/etc/apt/sources.list.d/mongodb-org-3.2.list
ubuntu16.04
echo "debhttp://repo.mongodb.org/apt/ubuntu xenial/mongodb-org/3.2 multiverse" | sudo tee
/etc/apt/sources.list.d/mongodb-org-3.2.list
3.更新软件源并安装mongodb
apt-get update
apt-get install -ymongodb-org
如果想要安装特定的版本,使用下面命令:
sudo apt-get install -ymongodb-org=3.2.9 mongodb-org-server=3.2.9 mongodb-org-shell=3.2.9
mongodb-org-mongos=3.2.9 mongodb-org-tools=3.2.9
4.配置启动文件
如果是ubuntu16.04的版本,需要手动新建/lib/systemd/system/mongod.service文件,并写入下
面内容:
[Unit]
Description=High-performance,schema-free document-oriented database
After=network.target
Documentation=https://docs.mongodb.org/manual
[Service]
User=mongodb
Group=mongodb
ExecStart=/usr/bin/mongod--quiet --config /etc/mongod.conf
[Install]
WantedBy=multi-user.target
5.启动、重启和关闭命令
```

service mongod start

service mongod restart

service mongod stop

## 6、安装各种小包

conda update conda

conda config --add channels https://mirrors.tuna.tsinghua.edu.cn/anaconda/pkgs/free/

conda config --set show\_channel\_urls yes

```
conda install -c quantopian ta-lib=0.4.9
conda install -c https://conda.anaconda.org/quantopian ta-lib
pip install --upgrade pip
pip install pymongo
pip install websocket-client
pip install msgpack-python
pip install qdarkstyle
pip install SortedContainers
pip install futuquant
pip install wmi
pip install future
pip install flask-socketio
pip install flask-restful
pip install flask-cors
pip install gevent-websocket
下载 vnpy 享受快乐吧
```
